* NOTE: This is a "working draft" sequence. It currently
* consists of 22 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to 24 novel human proteins designated NOV1-NOV14 (ABB09501-ABB09524), collectively referred to as NOVX proteins, and nucleic acids encoding them (AB093879-AB03902). NOVX proteins and connected acids encoding them (AB093879-AB03902). NOVX proteins and connected disorders or in the manufacture of a medicament for treating such disorders with specific applications described for each of the 24 sociated disorders or their homology to known proteins. Various disorders are associated with NOVX proteins including neurological disorders (e.g., Alzheimer's, Huntington's and Parkinson's diseases), pain, behavioural disorders, addiction, tubercous sclerosis, cancers (e.g., alpregies and autoimmune diseases), wyssthenia gravis, asthma, carious forms of arthritis, diabetes, thyroiditis, cardiovascular disease (e.g., hypertension), reproductive disorders, endomerriosis, carrious forms of arthritis, diabetes, thyroiditis, cardiovascular disease (e.g., hypertension), reproductive disorders, endomerriosis, cirrhosis, glomerular endothalosis, polycystic kidney disease, endocring cirrhosis, glomerular endothalosis, polycystic kidney disease, endocring disorders, obesity, bacterial infections and particularly cardiomyopathy. CC disorders, obesity, bacterial infections and particularly cardiomyopathy contents of identify cellular receptors or downstream effectors which the used to identify cellular receptors or downstream effectors which can energenesis, cell differentiation, cell motility, cellular cardiomeral molecules that useful and source of primers or probes for forests byte and comprising NOVX mucleic acids such cidentify and cloning NOVX homologues in other cell types. Cell dentifying and cloning NOVX homologues in other cell types. Cell dentifying and cloning NOVX are useful for redensing non-human cransing precurses and electronic properting and cloning not redensity of NOVX activity. The present sequence represents by encoding the correction and coloning not connected to the present sequence represen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ô

receptor, thymosin, neuromodulin-like family of proteins for diagnosing, treating cancer, atherosclerosis, neurological, skin and autoimmune disorders. Novel polypeptides and nucleic acids homologous to transmembrane

Claim 9a; Page 143; 323pp; English.

The invention relates to 24 novel human proteins designated NOV1-NOV14 (ABB09501-ABB09524), collectively referred to as NOVX proteins, and nucleic acids encoding them (ABQ93879-ABQ93902). NOVX proteins and nucleotides are useful in the treatment, diagnosis or prevention of associated disorders or in the manufacture of a medicament for treating such disorders, with specific applications described for each of the 24

CC disorders are associated with NOVX proteins including neurological disorders are associated with NOVX proteins including neurological disorders (e.g., Alzheimer's, Huntington's and Parkinson's diseases), pain, behavioural disorders, addiction, tuberous sclerosis, cancers (e.g., colorectal cancer, leukaemia and osteosarcoma), immune diseases (e.g., nallergies and autoimmune diseases), myasthenia gravis, asthma, various forms of arthritis, diabetes, thyroiditis, cardiovascular disease (e.g., hypertension), reproductive disorders, endometriosis, pancreaticis, incontinence, psoriasis, scleroderma, alopecia, ulcers, pancreaticis, cirrhosis, gobesity, bacterial infections and particularly cardiomyopathy, atherosclerosis, cell signal processing-related disorders endocrine disorders, obesity, bacterial infections and particularly cardiomyopathy, atherosclerosis, cell signal processing-related disorders and disorders of metabolic pathway regulation. NoVX nucleic acids and polypeptides may be used to identify cellular receptors or downstream effectors which binds to a NOVX protein, and are also useful as targets for the constinction, haematopoiesis, wound healing and angiogenesis. NoVX nucleic acid sequences can be used to identify a cell or tissue type and are useful as a source of primers or probes for forensic biology and for identifying and cloning NOVX homologues in other cell types. Cells comprising NOVX nucleic acids are useful for studying the function and critity of NOVX proceins and for identifying and evaluating modulators of NOVX accinity. The present sequence represents DNA encoding the ó 480 Greeccaarrereacrearacreacrracegrirecreecerecesacces CCCCCGTACTGCGGGCGCCCTGAGCCCTCGGCCCGCATCGTGGGGGGCTCAAACGCGCAG 180 CCCCCGTACTGCGGGCGCCCTGAGCCCTCGGCCCGCATCGTGGGGGGCTCAAACGCGCAG 180 TCCCTCATCGCCCCCTCCTGGGTCCTCTCCGCTGCTCATGTTCATGACGAATGGGACG 300 360 420 GACGGCGCGCACACCCCGCCAGTGGCCGCCATCGTGCTGCCGGCCAACTACAGCCAAGTG 420 480 GCCACCGGCTGGGGAGACGTCCAGGAGGCAGATCCTCTGCCTCTCCCCTGGGTGCTACAG 600 900 9 1 GGGCCCTTGTCCTGGGCCCATGGCCCAGAAGGGGGTCCTGGGGCCTGGGGCCTGGGGGCT 1 deseccinérecreseceareseceasandes de la sesection de la seconda de la s GIGGCCAATICIGACICAIACICACITIACGGGIIGGIGCCGICCGGACCCGCIAGGGGC COGGGCACCTGGCCTTGGCAAGTGAGCCTGCACCATGGAGGTGGCCACATCTGCGGGGGC CCGGGCACCTGGCCTTGGCAAGTGAGCCTGCACCATGGAGGTGGCCACATCTGCGGGGGC TTGGAGCCCGCGGCCGAGTGGTCGGTACTGCTGGGCGTGCACTCCCAGGACGGGCCTG GAGCTGGGCCCTGCCTGCTGCGCCTCGCCTCACCCGCCAGCCTGGGCCCCGCC GTGTGGCCTGTCTGCCCCCCCCCCCCTCACACCGCTTCGTGCACGGCACCGCCTGCTGG grereccrercreccreccececercacacacecricerecacacacacacecrecres GCCACCGGCTGGGGAGACGTCCAGGAGCAGATCCTCTGCCTCTCCCCTGGGTGCTACAG Gaps 0 Length 1102; Sequence 1102 BP; 162 A; 371 C; 353 G; 216 T; 0 U; 0 Other; Indels 100.0%; Score 1102; DB 6; 100.0%; Pred. The present invention relates to the isolation of novel human proteases,
and the mucleic acids encoding them. The sequences of the invention are
conditionally immune-related diseases and disorders (e.g. breast,
colon, lung), immune-related diseases and disorders (e.g. inflammatory
diseases and asthma), cardiovascular diseases (e.g. restenosis and
coronary thrombosis), brain or neuronal-associated diseases, metabolic
disorders (e.g. diabetes, obesity), inflammatory disorders (e.g.
cronary thrombosis), prain or neuronal-associated diseases, metabolic
disorders (e.g. diabetes, pain, sexual dysfunction, mood disorders, attention
diseases, migraines, pain, sexual dysfunction, mood disorders, attention
disease, and disorders (e.g. Alzheimer's disease, Parkinson's
disease) and dyskinesias. The nucleic acids and polypeptides are also
useful for treating viral infections such as ocular disease (e.g.
disucoma) and macular degeneration. ABX31802 represent DNA
sequences encoding for the novel human proteases of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                183

WPI; 2002-519664/55. P-PSDB; ABB98135 New isolated Protein Modification and Maintenance polypeptides, useful for diagnosis, and treatment of e.g. gastrointestinal disorders.

```
The invention relates to an isolated Protein Modification and Maintenance diagnosis, treatment and prevention of disorders associated with decreased expression or activity of PMMM. These include gastrointestinal disorders (e.g. Crohn's disease), cardiovascular disorders (e.g. Crohn's disease), cardiovascular disorders (e.g. bypetreision), autoimmune/inflammatory disorders (e.g. anaemia), cell proliferative disorders, developmental disorders (e.g. anaemia), cell proliferative disorders, developmental disorders, epithelial disorders reproductive disorders (e.g. ectopic prepancy), and in gene therapy or a vaccine for such diseases. They may also be used in the assessment of the effects of exogenous compound on the expression of nucleic acid and amino acid sequence of protein modification and maintenance molecules. The current sequence represents a human PMMM encoding sequence of the invention, encoding a polypeptide which has been found to have homology

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for Synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 70 TCTGACTCATACTCACTTTACGGGTTGGTGCCGTCCGGACCCGCTAGGGGCCCCCCCGTAC 129

Novel human prostasin-like serine protease polypeptide and polymucleotide which can be regulated for treating metastasis of malignant cells, inflammation, atherosclerosis, neurodegenerative disease and infections.

Claim 1; Fig 1; 111pp; English

This invention comprises the CDNA and protein sequences of an isolated prostasin-like serine protease and reagents and methods for requlating the human prostasin-like enzyme activity. Prostasin is a trypsin-like serine protease and reagents and methods specific the human prostasin-like serine protease is useful for immunodetection and for prostasin-like serine protease is useful for immunodetection and inpay specimens, plasma samples and body fluids. The antibody may be used to modulate enzyme activity in a disease, such as metastasis of malignant cells, tumour angiogenesis, inflammation, chronic obstructive pulmonary disease (COPD), atheroselserosis, ineurodegenerative disease (C. g. prion protein amyloid plaques of Genstmann-Strausslers Syndrome, Centzfeldt-Jakob disease, Scrapie) or infection, particularly viral infection. The human prostasin-like serine protease enterpeutic target of decreasing human prostasin-like serine protease activity, in particular for treating or preventing metastatic cancer. The agonists and antagonists of the nucleotide sequence may be used to mimic, augment and inhibit the enzyme activity which may be useful to treat osteoporosis, Paget's disease and degradation of bone implants particularly dental implants. Altered levels of human prostasin-like serine procease activity inhibits both smooth muscle cell proliferation and lipid accumulation and inhibit the progression of restenosis and atherosclerosis. The nucleic acid sequence is also useful in diagnostic assays for detecting diseases and abnormalities or susceptibility to diseases related to the presence of mutations in nucleic acid sequences prostasin-like serine protease #1 nucleotide sequence of the invention which encode the enzyme. The present sequence represents the human

830 Primers useful for synthesizing full length cDNA clones and their use in genetic manipulation.

SEQ ID NO 650; 1380pp + Sequence Listing; English. Claim 2;

The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5' - and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for claritying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      428
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 488
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               548
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           909
libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is the nucleotide sequence of the 5'-end of a cDNA provided in the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  248
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              308
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   322
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               382

The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful length clones were burntion of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence was used as the representative sequence clone which was used in homology searches to identify the clone. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from

830 Primers useful for synthesizing full length cDNA clones and their

in genetic manipulation.

prostasin-like serine protease and reagents and methods for regulating the human prostasin-like enzyme activity. Prostasin is a trypsin-like serine protease purified from human seminal fluid. An antibody specific from human seminal fluid. An antibody specific diagnosis of micro-meteastases, auch susful for immundetection and diagnosis of micro-meteastases, auch as useful for immundetection and diagnosis of micro-meteastases, auch as metastasis of medignate enzyme activity in a disease, such as metastasis of malignant cells, tumour angiogenesis, inflammation, chronic obstructive pulmonary disease (COPD), atherosclerosis, neurodegenerative disease (CoPD) protein amyloid plaques of Genstmann-Straussler Syndrome, creuzfeldt-Jakob disease, Scrapie, or infection, particularly viral infection. The human prostasin-like serine protease gene provides a therapeutic target of decreasing human prostasin-like serine protease activity, in particular for treating or preventing metastatic cancer. The agonists and antagonists of the uncleotide sequence may be used to mimic, augment and inhibit the enzyme activity which may be useful to treat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; prostasin-like serine protease; cytostatic; antiatherosclerotic; virucide; osteopathic; antiinflammatory; vasotropic; neuroprotective; trypsin-like; metastasis; autoimmune lesion; attenosclerosis; gene; renal failure; malignant cell; tumour angiogenesis; enzyme; inflammation; chronic obstructive pulmonary disease; COPD; restenosis; atherosclerosis; neurodegenerative disease; prion protein; infection; amyloid plaque; Genetralende-Jakob disease; viral infection; Scrapie; Creutzfeldt-Jakob disease; metastatic cancer; ligid accumulation;

osteoporosis, Paget's disease and degradation of bone implants particularly dental implants. Altered levels of human prostasin-like serine protease activity inhibits both smooth muscle cell proliferation and lipid accumulation and inhibit the progression of restenosis and atherosclerosis. The nucleic acid sequence is also useful in diagnostic assays for detecting diseases and abnormalities or susceptibility to diseases related to the presence of mutations in nucleic acid sequences which encode the enzyme. The present sequence represents the human prostasin-like serine protease #2 nucleotide sequence of the invention
                                                                                                                                                                                                                                                                                CCCGCGGCCGAGTGGTCGGTACTGTGGGCGNTGCACTCCAAGGACGGCCCTGGACGGC

AAF98698 standard; DNA; 1796 BP AAF98698; RESULT 11 d ð 셤 ò g à The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to traed disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and to produce other types of dara and products dependent on DNA and am to produce other types of data and products dependent on DNA and and a cold sequences. is afflicted with ovarian cancer by comparing: (1) the expression of a marker (1) (see ARP98954 to AAP98730), in a patient sample, and (2) the normal level of expression of (1) in a control non-ovarian cancer sample, where a significant difference between the level of expression in (a) and (b) is an indication that the patient is afflicted with ovarian cancer. (1) have cytostatic activities and can be used in antisense gene therapy. The method, compositions and kits from the present invention can be used for: (1) assessing and treating ovarian cancer; (2) making isolated hybriddoms, which produces an antibody useful for ovarian cancer assessment; and (3) inhibiting ovarian cancer in a patient. AAF98573 to AAF98593 represent human kinase marker primers and probes which are used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     193
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   61 GIGGCCAAIICIGACICAIACICACIIIACGGGIIGGGGCGCCGGCCCGCTAGGGGC 120
